

## MOSELEY ANNOUNCES AXXCELTE BAS Family

**April 12<sup>th</sup>, 2015 Santa Barbara, California** — Moseley, a global leader and a premier provider of broadcast wireless communications products and technologies, announced today the introduction of the AxxceLTE™ BAS family of products at the National Association of Broadcasters show in Las Vegas between April 13<sup>th</sup> and April 17<sup>th</sup> 2015.

The AxxceLTE™ product family has been developed from the ground up based on Moseley Group's expertise in the wireless broadband infrastructure technologies and a deep understanding of the demanding 4G wireless applications.

The first offerings within the AxxceLTE™ BAS family are a line of optimized 3GPP-compliant eNodeB subsystems, a compact cost-optimized Evolved Packet Core (EPC) platform, and User Equipment. The 3GPP standard-compliant AxxceLTE™ eNodeB provides LTE wireless access over a wide range of frequency bands and specifically the Broadcast Auxiliary Services band.

The AxxceLTE™ family supports all LTE bandwidths and TDD and FDD modes and all 6 TDD configurations allowing broadcasters to optimally use the limited spectrum for multiple remotes including helicopters. The AxxceLTE™ BAS family enables full duplex audio and video transmissions. Unique features of the product facilitate real time frequency coordination between users in the 2GHz BAS band

Jamal Hamdani, president and CEO of Moseley said: "We are delighted to make these announcements today. They represent the culmination of the hard work of our staff on every aspect of the technology. Having a strong technical expertise and a deep understanding of all components of the LTE ecosystem and ENG broadcast video transmission space places Moseley in a unique position to satisfy our customers' requirement".

Moseley is an ISO 9001 company with offices in: Santa Barbara, California; Richmond, Virginia; San Diego, California; and in the U.K., France, and Egypt. Moseley Associates, Inc.; [www.moseleysb.com](http://www.moseleysb.com) and its wholly owned subsidiaries: Axxcelera Broadband Wireless, Inc.; [www.axxcelera.com](http://www.axxcelera.com), CarrierComm, Inc.; [www.carriercomm.com](http://www.carriercomm.com), and E-band Communications, LLC; [www.e-band.com](http://www.e-band.com) offer wireless solutions from 9.6 kbps to 3 Gbps covering the 250 MHz to 90 GHz spectrum for both point-to-point and point-to-multipoint applications for the broadcast, carrier, broadband enterprise, and service provider marketplaces. Moseley uses proprietary technologies and owns more than 50 patents. The company has delivered more than a million radios deployed in over 120 countries.
