Moseley to Demonstrate Digital STL at Latin American Broadcast Show '09

SANTA BARBARA, CALIFORNIA - June, 2009 - Moseley Associates, Inc. will meet with Latin American Broadcasters at LABS '09 at the Hyatt Regency, Miami, Florida on July 9th & 10th.

Moseley's Bill Gould talks with organizers at LABS '08

On display will be the newly released Event 5800 High Capacity Digital Aural STL/TSL, a bidirectional T1/E1/IP link capable of 8 uncompressed stereo audio streams and IP for Ethernet networking applications.

The Starlink digital STL family features linear uncompressed AES digital and analog audio plus Ethernet data transport for sophisticated contribution and distribution requirements. Starlink is available on worldwide STL bands and in T1/E1 models.

Bill Gould, Moseley Sales Engineer said, "Broadcasters in Latin America are experiencing the transition to digital broadcast chains. Making the right STL choice today will insure that stations are ready now and in the future."

Broadcasters from the Radio and TV-Video industry are invited to join in this fourth installment of LABS, which will be a rendezvous point for the most prestigious broadcasters and technology providers of LATAM and the world.
